Title: Library Management System Proposal

Charlie Kinnett

[COMPANY NAME] | [Company address]

Stakeholders

Identifying people who are interested in the project, **Such as**

- Library Staff
- Library Member
- System
- Admin

Actors and Goals:

Primary actors:

Library Member: This actor can search for books, check out books, renew borrowed items, view borrowing history, and receive notifications.

Library Staff: The library staff can manage the catalog, monitor inventory, assist members with check-in/check-out, and generate reports.

Secondary actors:

Admin: This actor can add, remove, or update catalog entries, member information, and manage system settings.

System: Responsible for managing the automated processes of catalog management, member registration, check-in/check-out, search and discovery, and notifications.

Use Cases

Admin

- **Add Book to Catalog:** Admins can add new books to the library catalog, providing details such as title, author, genre, and availability.
- **Register Member:** Admins have the ability to register new members to the library, collecting necessary information such as name, contact details, and borrowing privileges.
- **Add/Modify Catalog Entry:** Admins can add new entries to the catalog or modify existing ones, ensuring accurate and up-to-date information for library resources.

- **Add/Modify Member Information:** Admins can add or modify member information, updating details such as contact information, borrowing limits, and membership status.
- **Automate Check-in/Check-out Process:** Admins can implement automation for routine tasks such as book check-in/check-out, reducing manual efforts and increasing efficiency.
- **Generate Reports:** Admins have the ability to generate reports on library operations, including book circulation, overdue items, and popular titles, aiding in decision-making and resource allocation.
- **Manage System Settings:** Admins can manage system settings such as notification preferences, fine policies, and user access levels, customizing the system to meet the library's needs.

Member

- **Search for Books:** Members can search for books in the library catalog based on titles, authors, or genres, facilitating discovery of relevant resources.
- **Place Hold on Book:** Members can place holds on unavailable books, receiving notifications when the books become available for pickup.
- **View Borrowing History:** Members can view their borrowing history, including past checkouts, due dates, and return status, aiding in tracking and managing borrowed items.
- **Renew Books:** Members have the ability to renew borrowed books online, extending the borrowing period if the items are not overdue or renewal limits are not exceeded.
- **Receive Notifications:** Members receive notifications for various events such as hold availability, upcoming due dates, and overdue items, ensuring timely communication and reminders.
- **Manage Account:** Members can manage their account settings, including updating contact information, changing password, and adjusting notification preferences, enhancing user control and experience.

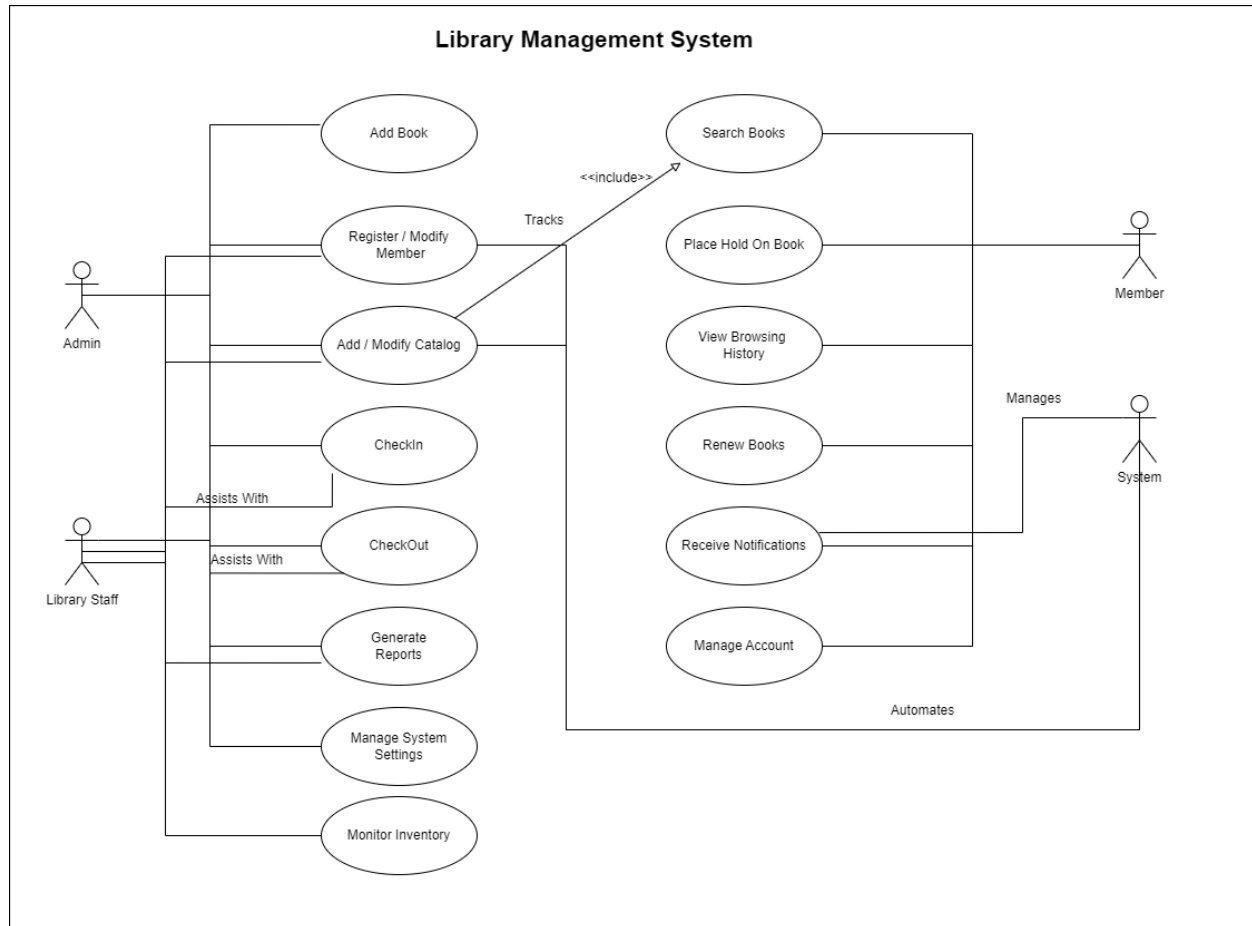

Library Staff

- **Manage Catalog Entries:** Library staff can manage catalog entries, adding new books, updating existing records, and removing outdated entries as necessary.
- **Monitor Inventory:** Library staff can monitor inventory levels, ensuring accurate tracking of library assets and minimizing instances of misplaced or lost items.
- **Assist with Check-in/Check-out:** Library staff can assist members with book check-in/check-out processes, providing guidance and support as needed.
- **Generate Reports:** Library staff have access to tools for generating reports on library operations, including book circulation, inventory status, and member activity, facilitating data-driven decision-making.
- **Manage Member Accounts:** Library staff can manage member accounts, including registration, updating member information, and addressing account-related inquiries or issues.
- **System Administration:** Library staff have administrative privileges to manage system settings, user accounts, and access permissions, ensuring smooth operation and security of the library management system.

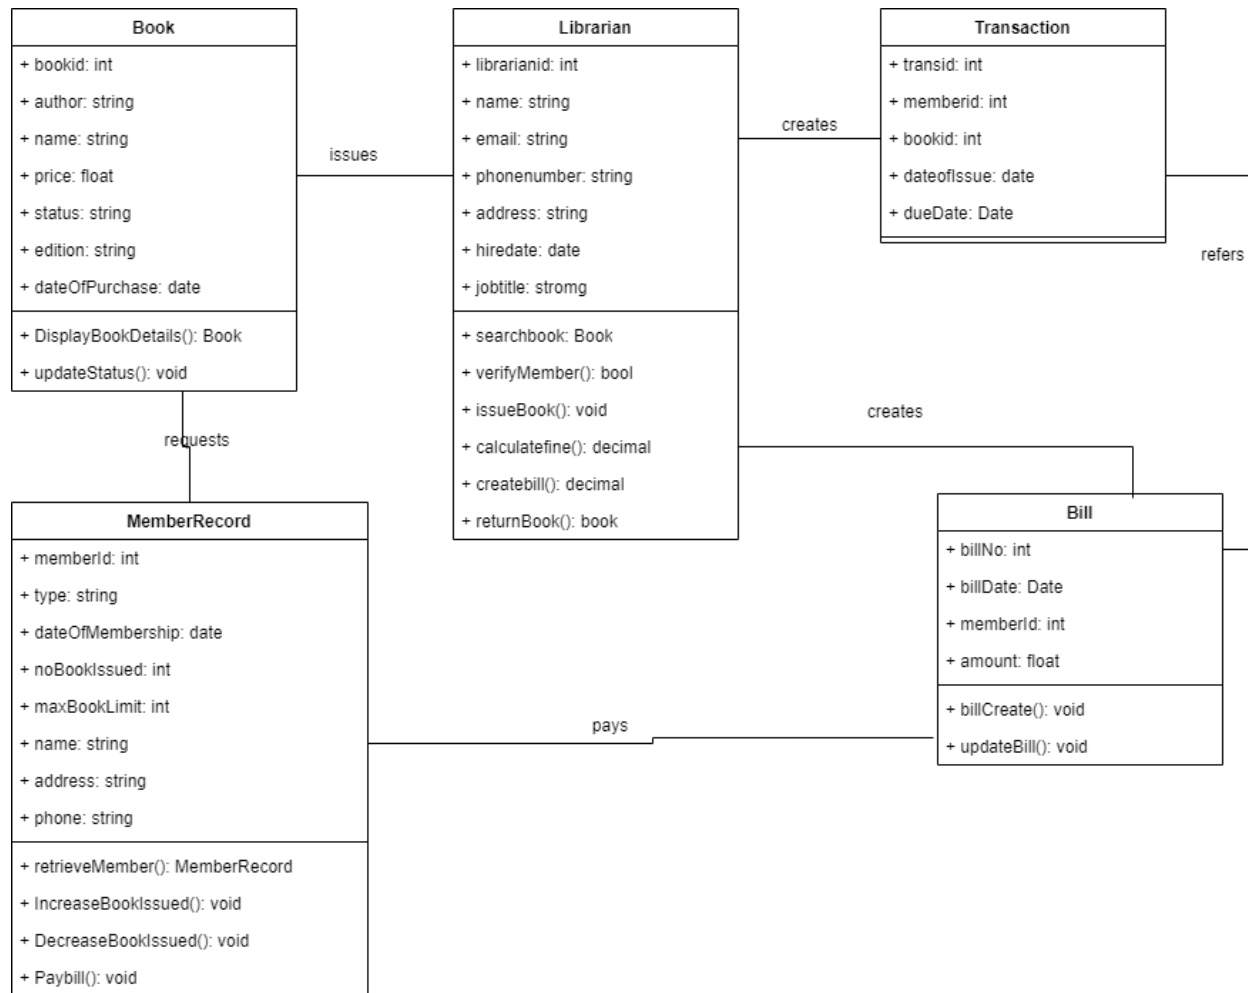

System

- **Automate Catalog Management:** The system automates catalog management processes, ensuring efficient handling of book entries, updates, and removals.
- **Track Member Registration:** The system tracks member registration information, maintaining a database of member details for reference and management purposes.
- **Integrate Barcode Scanners:** The system integrates with barcode scanners for efficient book check-in/check-out processes, reducing manual efforts and errors.
- **Manage Notifications:** The system manages notifications to members for various events such as hold availability, due dates, and overdue items, facilitating timely communication and reminders.
- **Ensure Data Security:** The system ensures data security and privacy measures are in place to protect sensitive member and catalog information from unauthorized access or breaches.

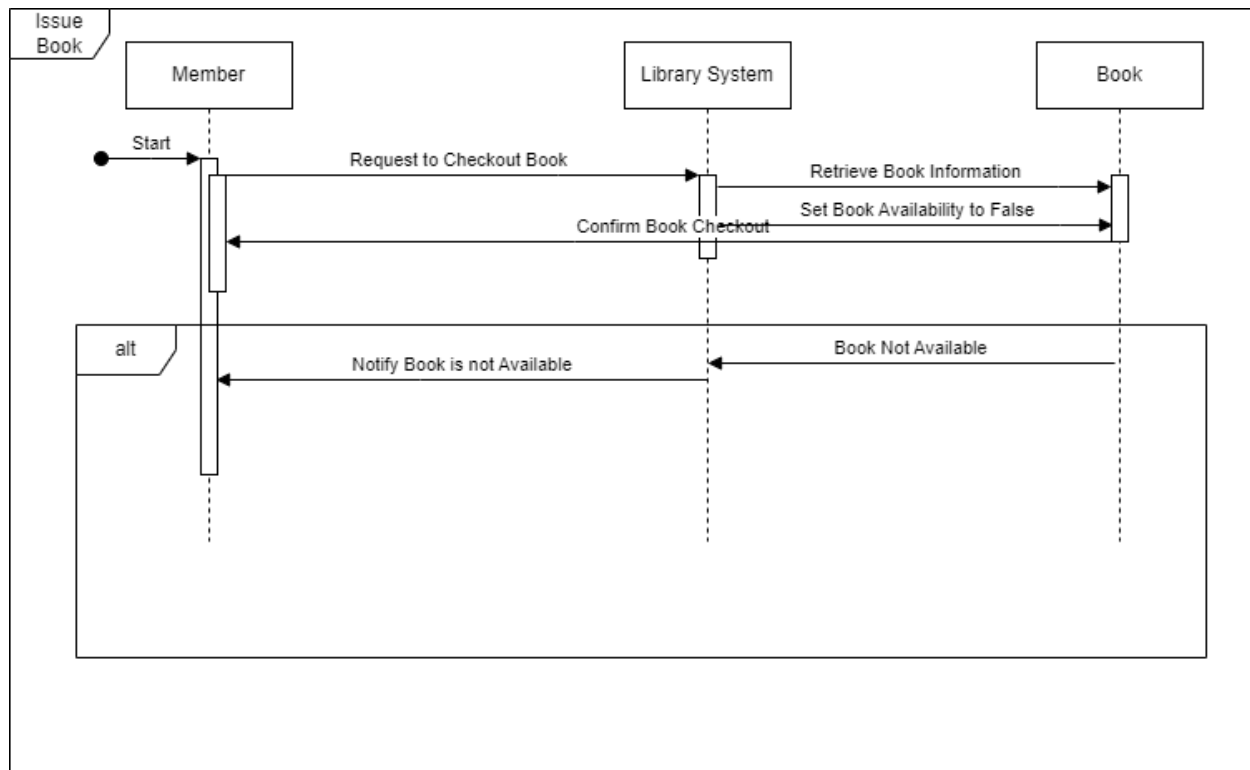

Use Case Diagram

Class Diagram

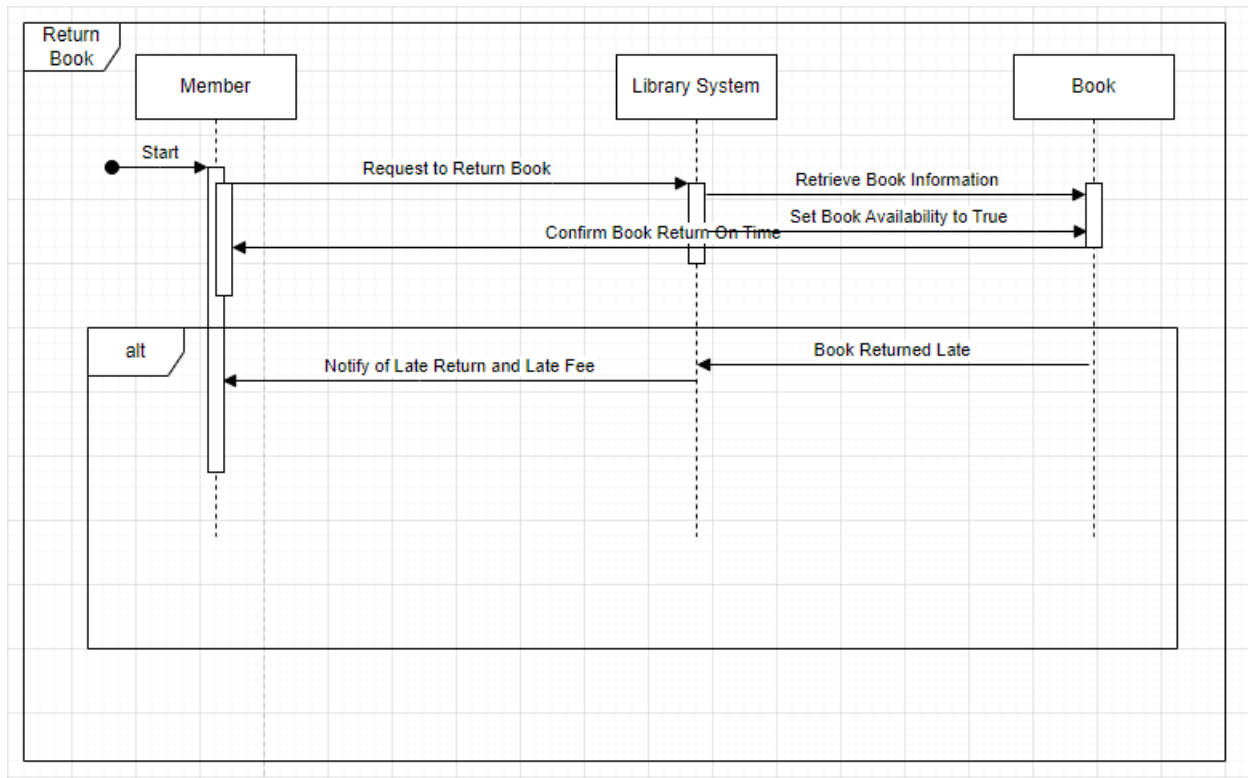

Sequence Diagram

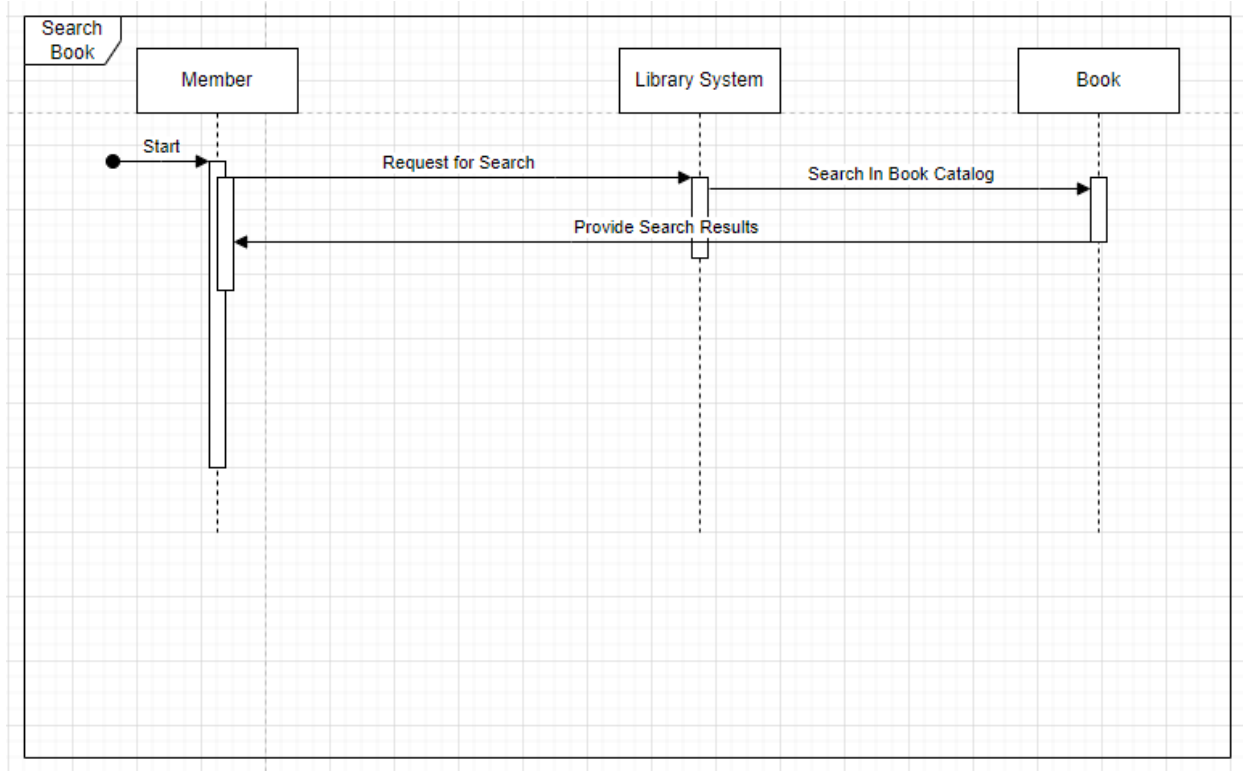

Request to Checkout Book:

- **Purpose:** This sequence diagram depicts the process of a user requesting to check out a book from the library management system.
- **Steps:**
 - The sequence starts with the user initiating a request to check out a book.
 - The system receives the request and verifies the availability of the requested book.
 - If the book is available, the system proceeds with the checkout process, updating the book's availability status and recording the transaction.
 - The system confirms the successful checkout to the user.
- **End Result:** The user successfully checks out the requested book from the library.

Request to Return Book:

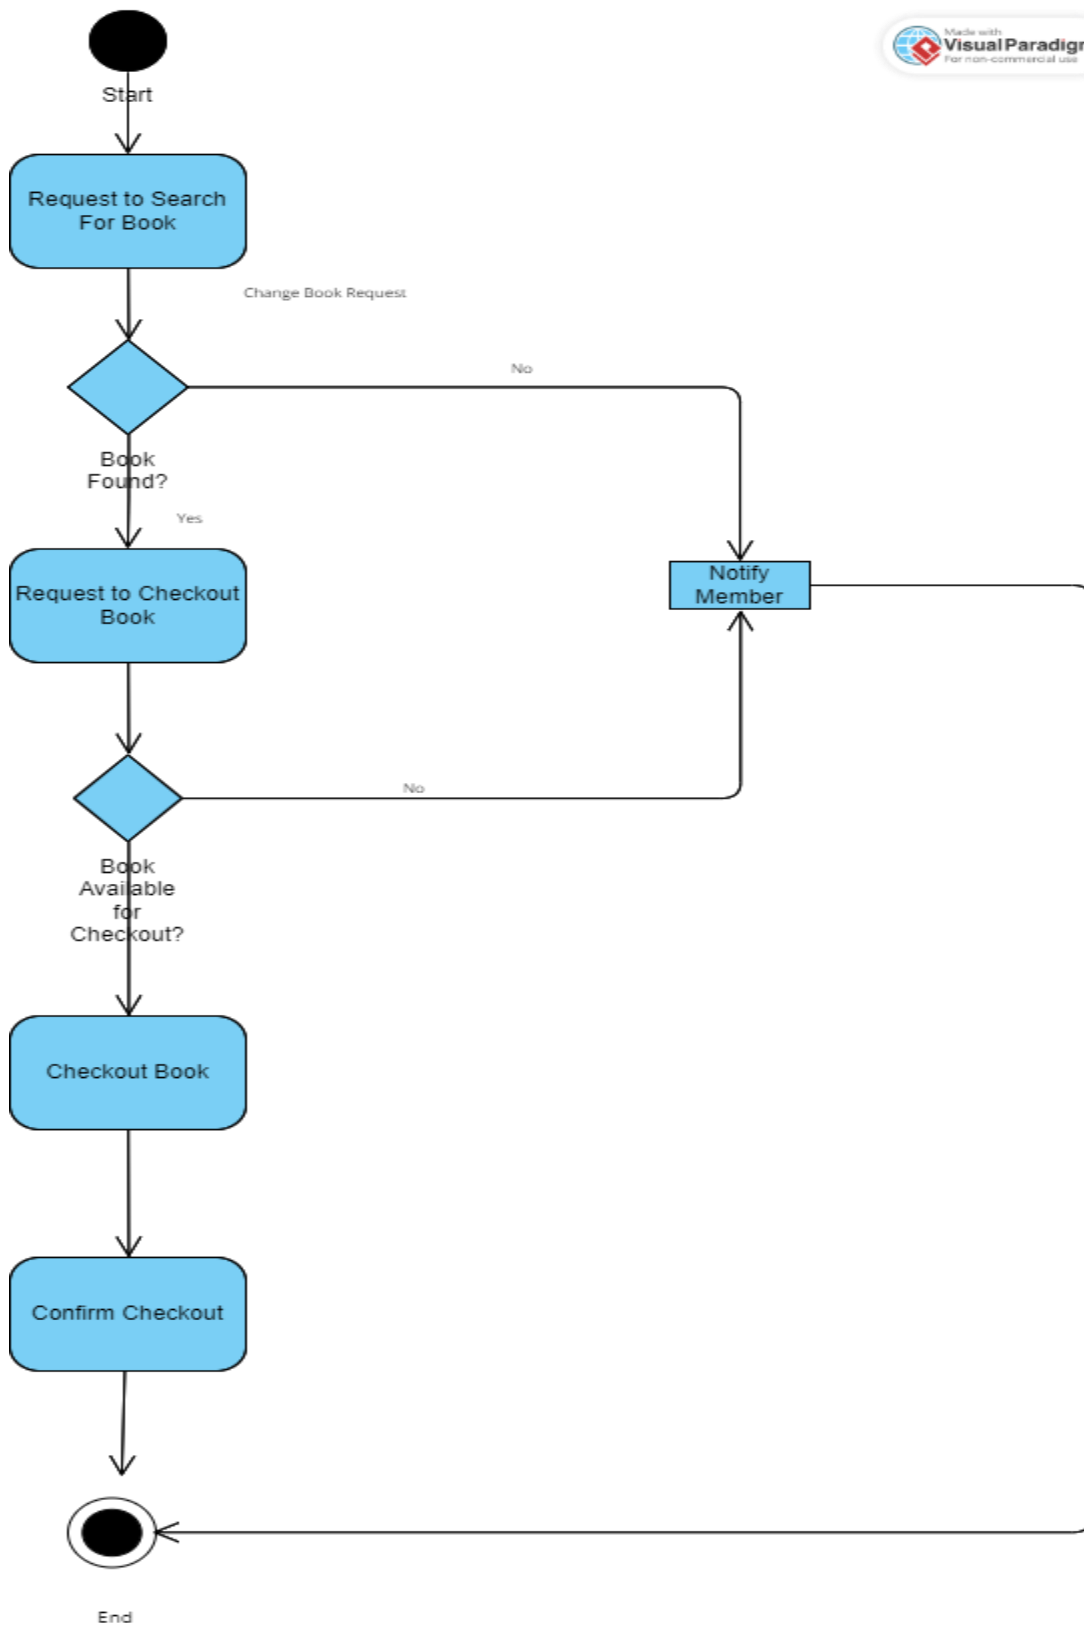

- **Purpose:** This sequence diagram illustrates the process of a user returning a book to the library management system.
- **Steps:**
 - The sequence begins with the user initiating a request to return a book.
 - The system retrieves information about the returned book and checks if it is returned on time or late.
 - If the book is returned on time, the system updates its availability status and confirms the return to the user.
 - If the book is returned late, the system calculates the late fee, updates the book's status, and notifies the user of the late return and fee.
- **End Result:** The user successfully returns the book to the library, either on time or with a late fee.

Request to Search for Book:

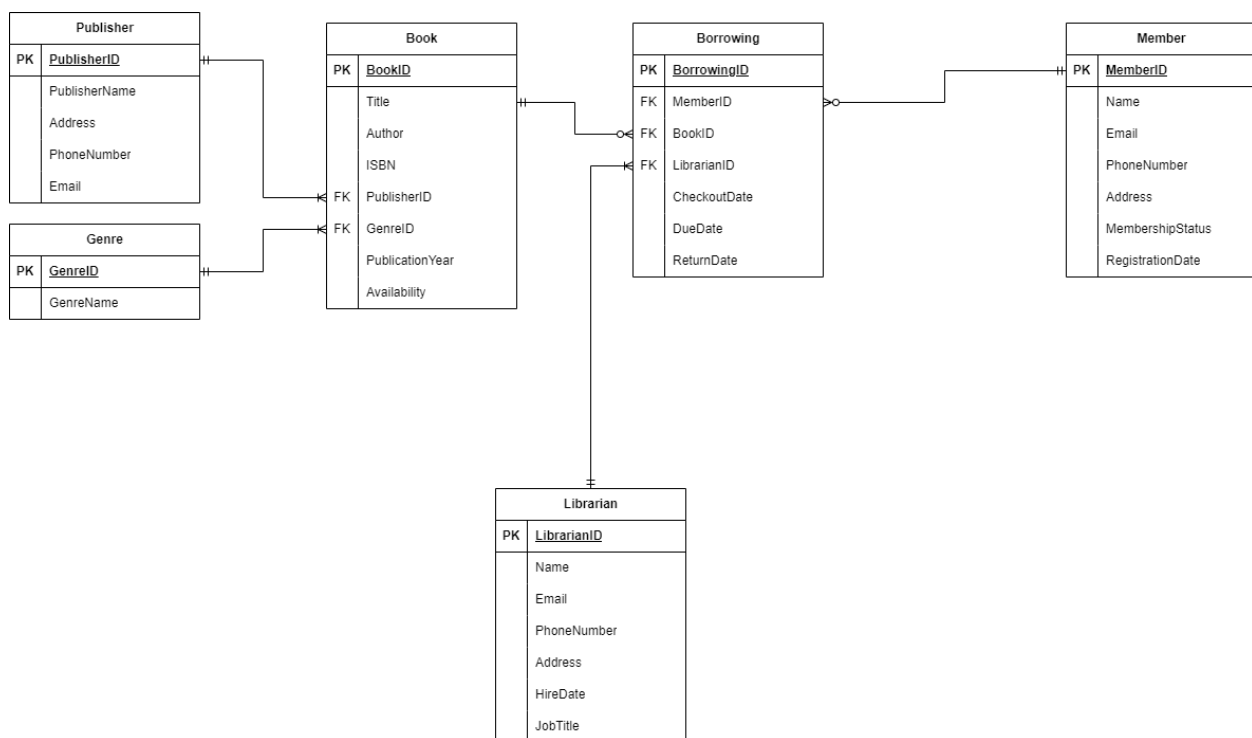

- **Purpose:** This sequence diagram outlines the process of a user searching for a book in the library management system.
- **Steps:**
 - The sequence starts with the user initiating a request to search for a book.
 - The system receives the search request and retrieves relevant information from the library catalog.
 - The system presents the search results to the user, including details such as book titles, authors, and availability.
- **End Result:** The user receives the search results and can view available books matching their search criteria.

Activity Diagram

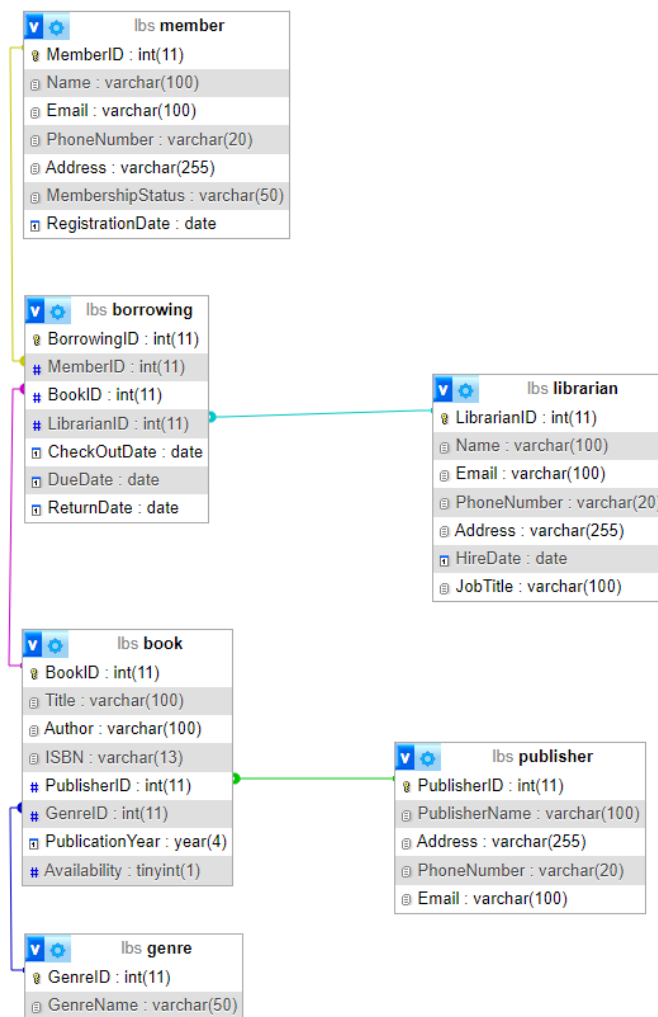

The library management system activity diagram depicts the sequential flow of key activities within the system: users initiate actions such as searching for books, checking books in and out, managing member accounts, and generating reports. The process begins with user requests and system responses, covering actions such as verifying book availability, processing transactions, updating member information, and generating reports based on user inputs. Each activity flows logically from one to the next, ultimately concluding with the completion of the user's action or system process, providing a concise overview of the system's functionality and interactions.

ERD (Entity Relationship Diagram)

Relational Schema

Scripts to create table with sample data to insert in the tables

CREATE TABLE Publisher (
